

PEREGRINE FALCON

Latin name: Falco peregrinus

Hello, My Name is
Maloo!

I am the fastest
member of the
animal kingdom.

Status: Least Concern

Age: 13 years in the wild
20 years in captivity

Wingspan: Up to 47 in

Weight: Up to 3.3lb

Found on every continent apart from
Antarctica

FUN FACTS:

They are the fastest flying bird
in the world and can reach
speeds of 240mph.

The main diet of a Peregrine is
other birds.

As a species they have been
known to catch and eat 2,000
different species of bird.

Their favourite type of bird is
Pigeons. Where you find a lot
of pigeons there will be a
Peregrine Falcon nearby.

The Falcon Eye

Their eyesight is 8x better than a human's
eyesight.

They can see UV (Ultraviolet light)

They have a second semi-transparent eyelid
called a nictitating membrane which goes
across the eye which they use a protective
goggle.
